- Listening Music

ABOUT ME:

Experienced Automation and Manual Test Engineer with a strong background in identifying and resolving issues through efficient testing strategies. Proficient in automation frameworks, manual testing methodologies, and defect tracking tools to ensure the delivery of high-quality, user-friendly software solutions. Seeking to leverage my expertise in quality assurance to contribute to a dynamic team.

EXPERIANCE:

Manual and Automation Test Engineer
Magic Software || Noida sector 125   Joining Date - April - 2024

- Collaborated with cross-functional teams, including developers and other QA engineers, to ensure comprehensive test coverage and adherence to project requirements.
- Conducted thorough functionality testing to validate software features and ensure they meet specifications.
- Performed smoke testing to verify the stability and critical functionalities of new builds before proceeding to further testing phases.
- Executed integration testing to confirm seamless interactions and data flow between system components.
- Conducted system testing to assess the complete system's compliance with functional and technical requirements.
- Performed regression testing to verify that recent code changes or bug fixes did not negatively impact existing functionalities.
- Executed compatibility testing across multiple devices, browsers, and operating systems to ensure consistent performance and user experience.
- Performed usability testing to enhance the overall user interface and experience, ensuring intuitive design and functionality.
- Conducted content testing to ensure the accuracy, relevance, and presentation of content across the platform. Performed ad-hoc testing to identify defects that might not have been covered by formalized test cases.

PROJECT:

Educational: Learning Web Application

- Task Materials: Access a wide range of study materials, assignments, and worksheets designed to reinforce learning and support course content.
- Mock Tests: Simulate exam environments with mock tests across various subjects, helping learners prepare effectively by identifying strengths and weaknesses.
- Educational Videos: Interactive video lessons created by experienced educators to explain complex topics in an easy-to-understand format, allowing for visual and auditory learning.
- Grade System: A built-in grading system that tracks performance across tasks, tests, and assessments, providing instant feedback and insights into progress.
- Progress Reports: Generate detailed reports on student performance, allowing users to track improvements and focus on areas that need attention.
- Personalized Learning Paths: Create customized learning plans tailored to individual needs, ensuring a focused approach to achieving academic success.
